

Folding instruction

For the box with a flip cover

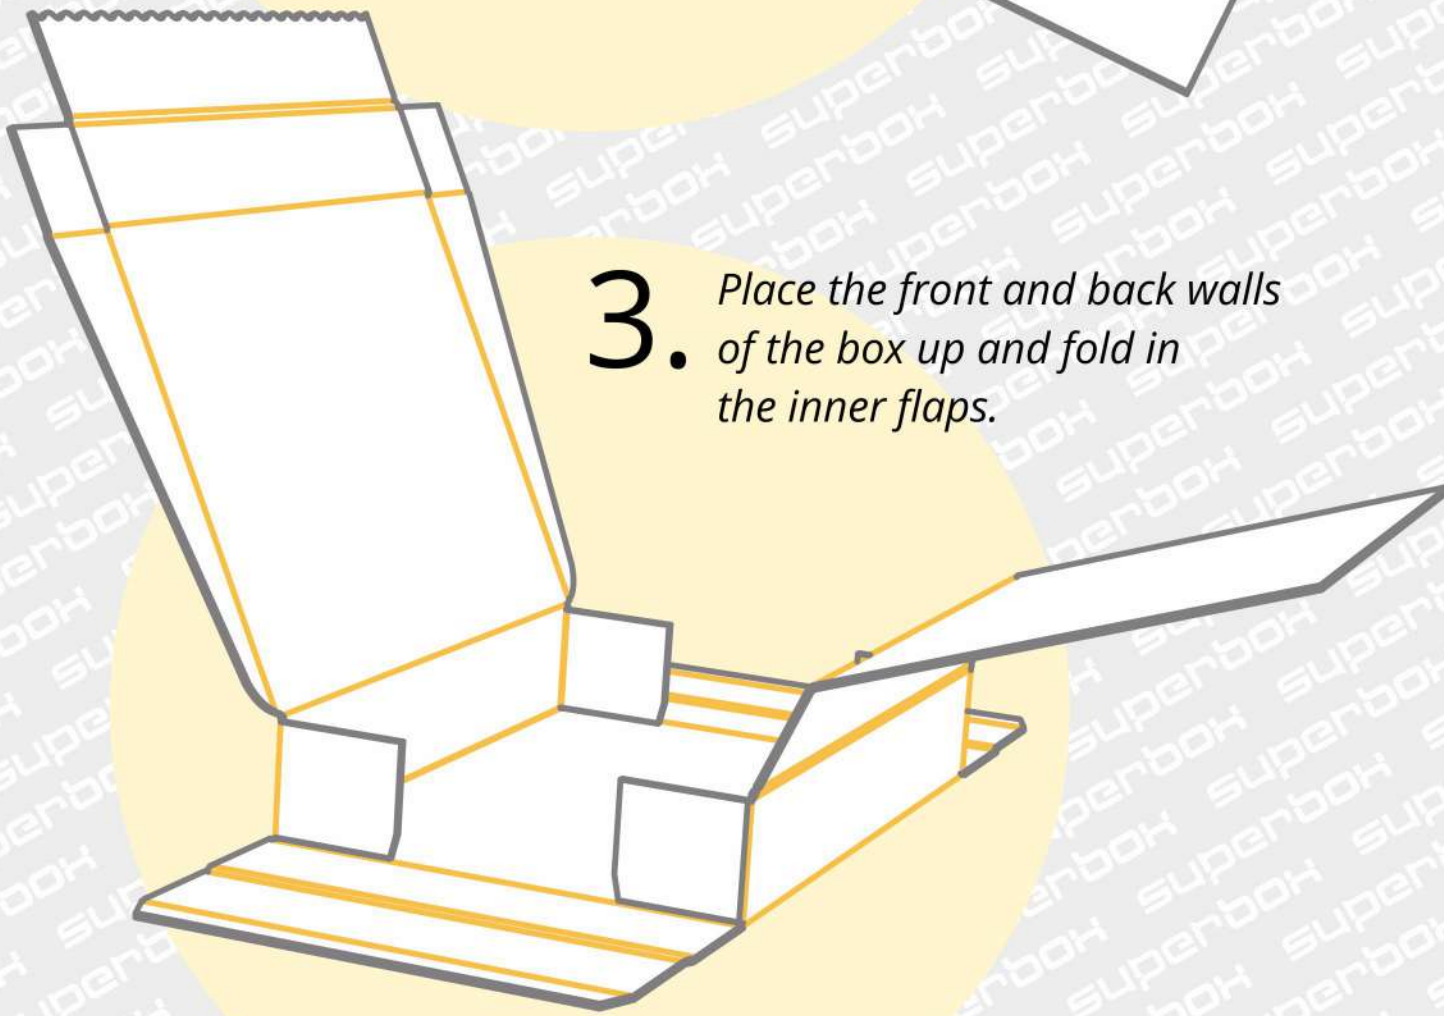

1. Place the cardboard form on a flat surface and "exercise" the creases by bending them slightly back and forth.

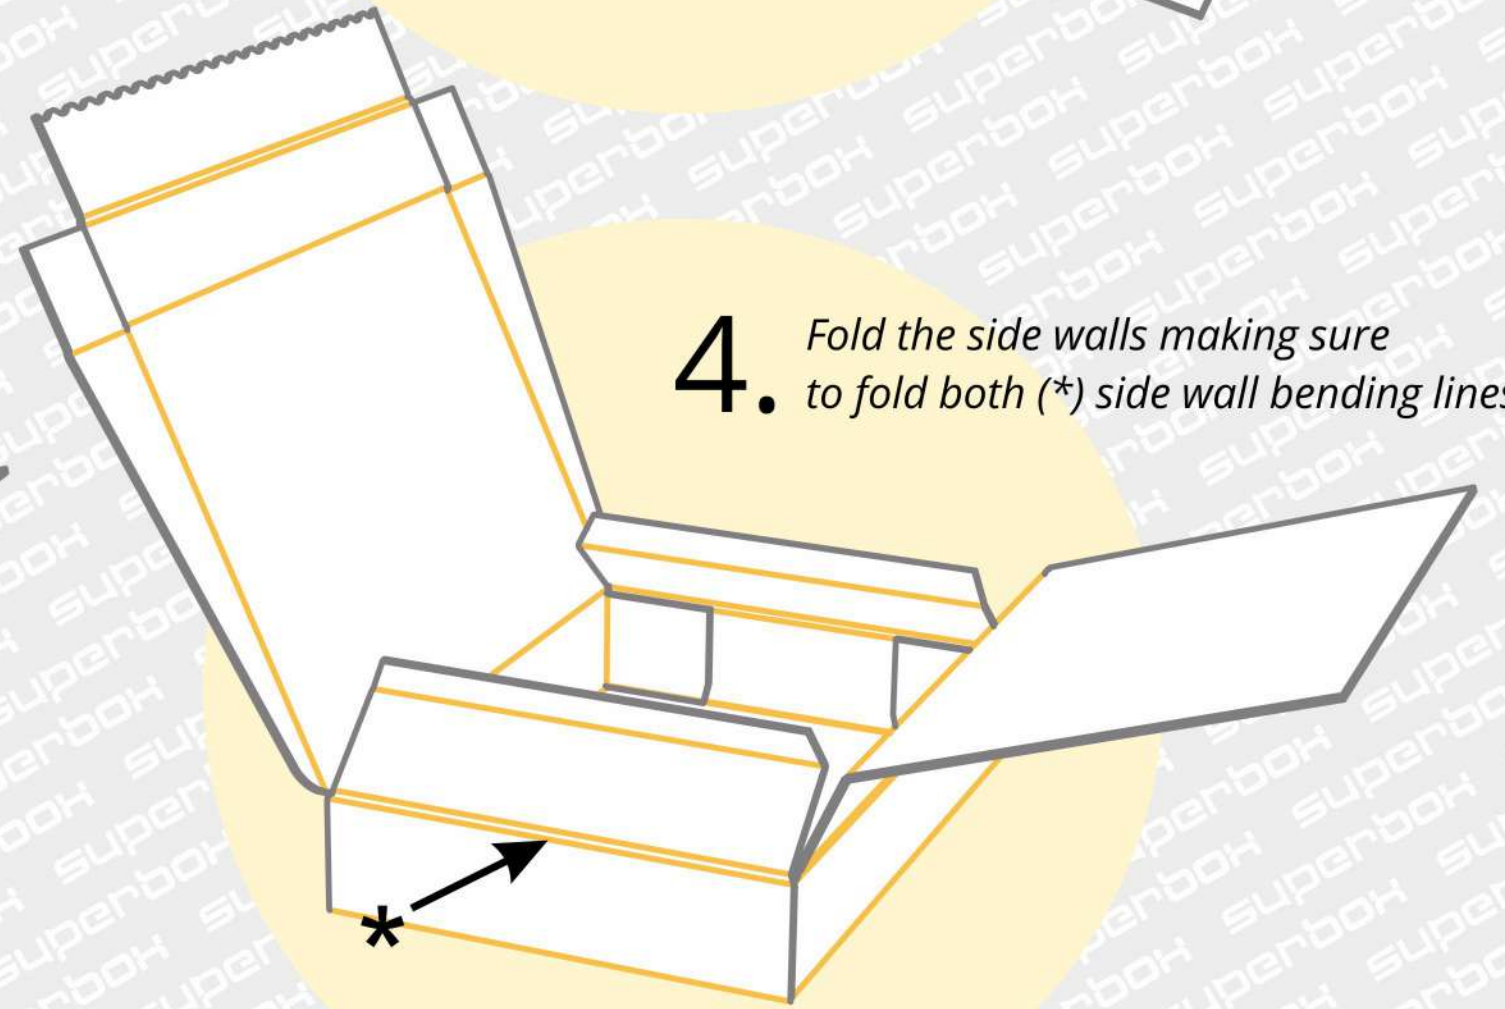

2. * Fold the cover closing line more, so that then it will not bounce back when the box is closed.

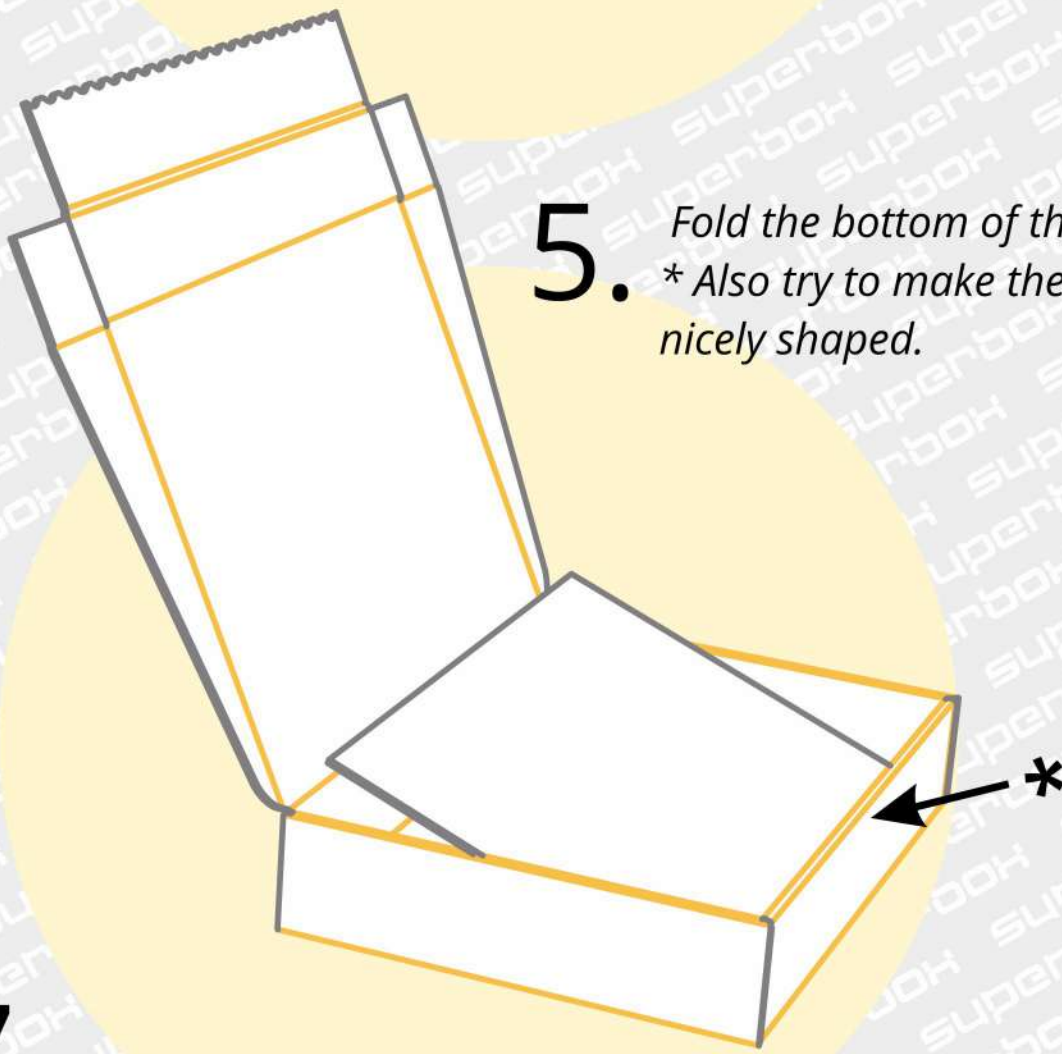

3. Place the front and back walls of the box up and fold in the inner flaps.

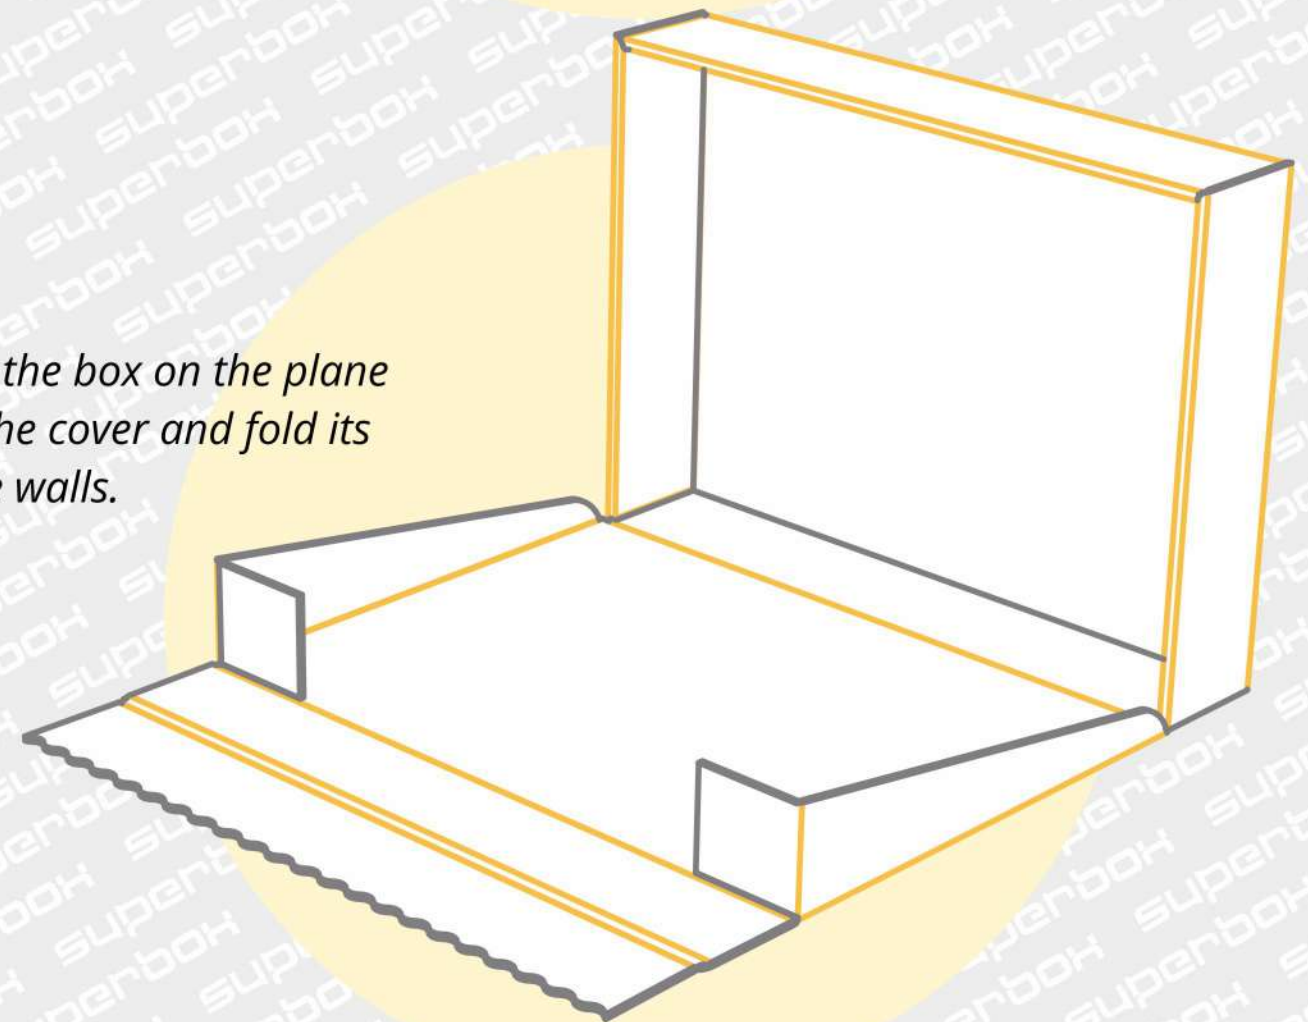

4. Fold the side walls making sure to fold both (*) side wall bending lines.

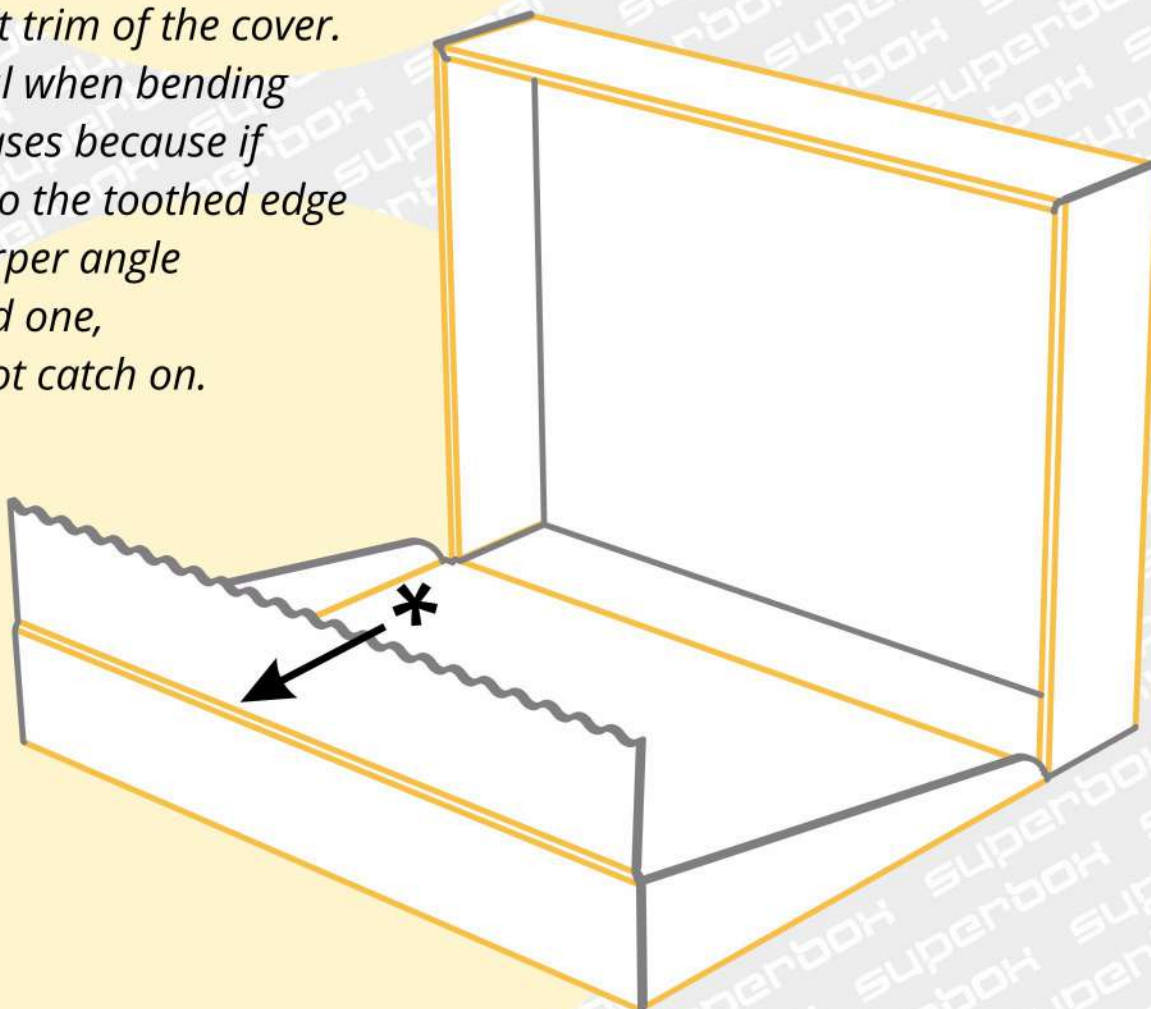

5. Fold the bottom of the box inwards. * Also try to make the double crease nicely shaped.

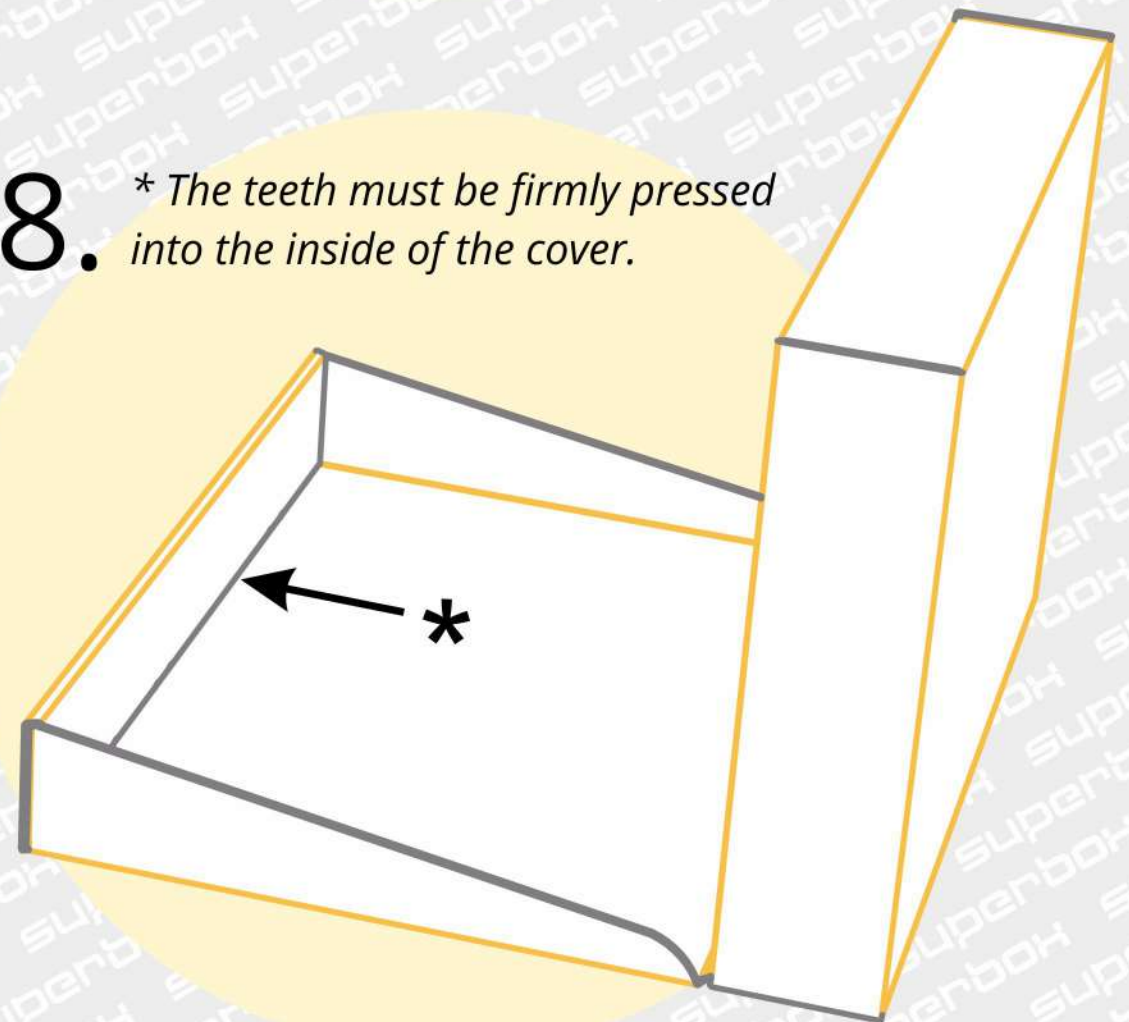

6. Put the box on the plane of the cover and fold its side walls.

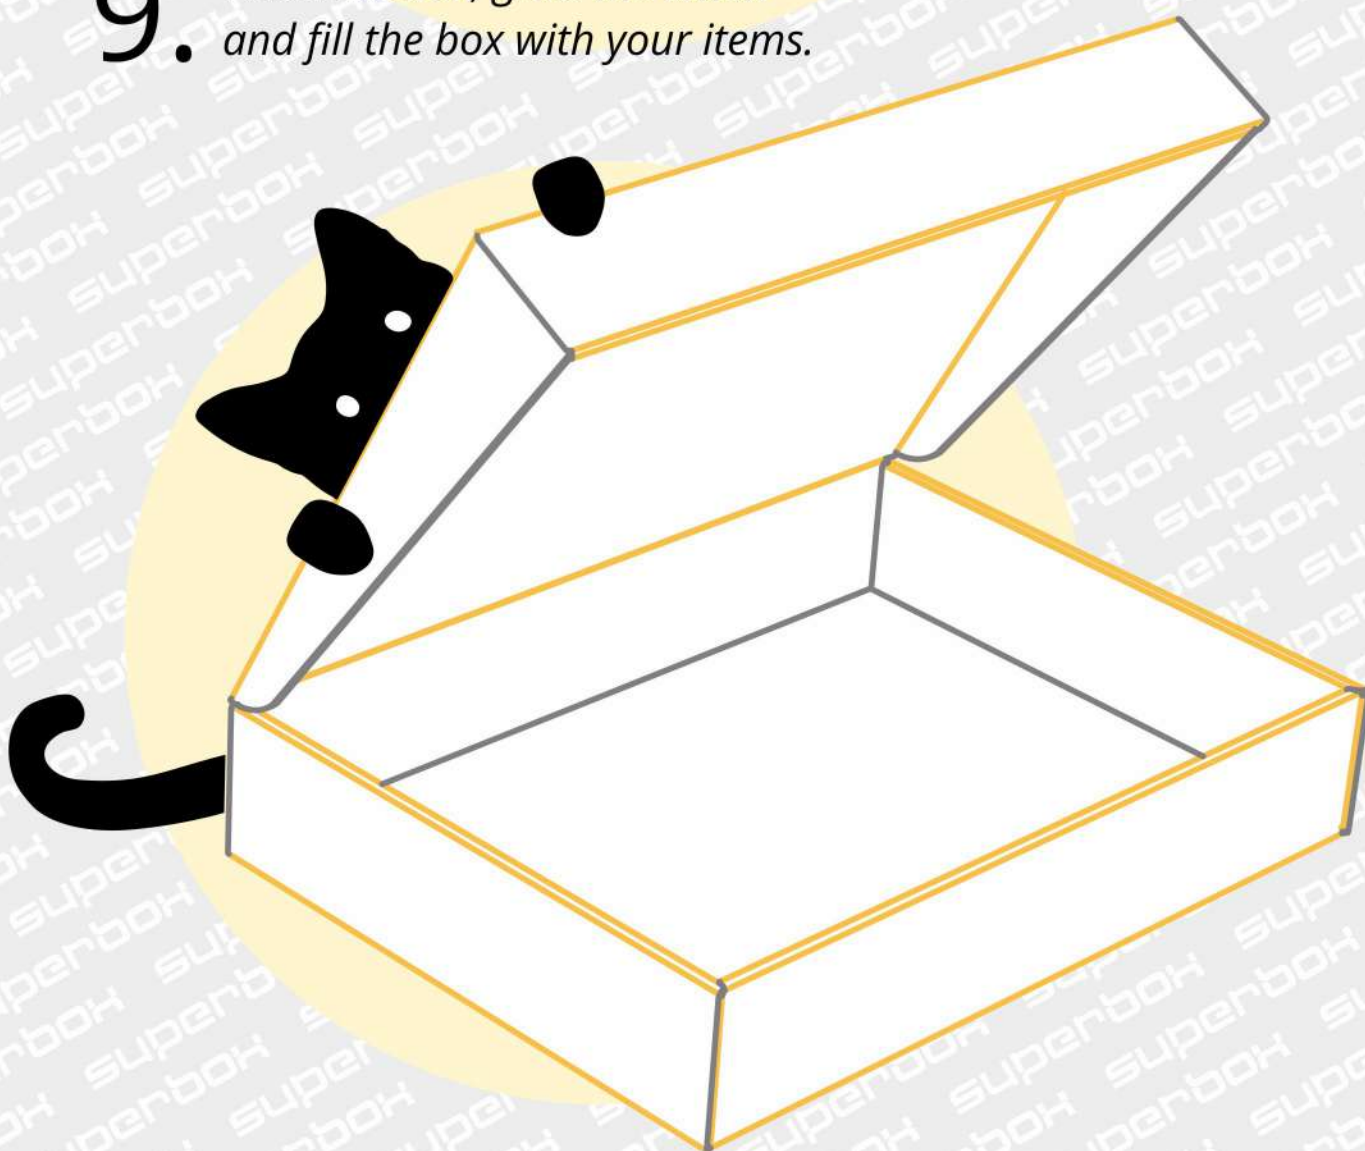

7. Fold down front trim of the cover. * Be very careful when bending the double creases because if the line closer to the toothed edge bends at a sharper angle than the second one, the teeth will not catch on.

8. * The teeth must be firmly pressed into the inside of the cover.

9. Place the box, grab the kitten and fill the box with your items.

10. Close the cover and enjoy your box that you have nicely constructed yourself.
