For a long pull-out gift box bottom

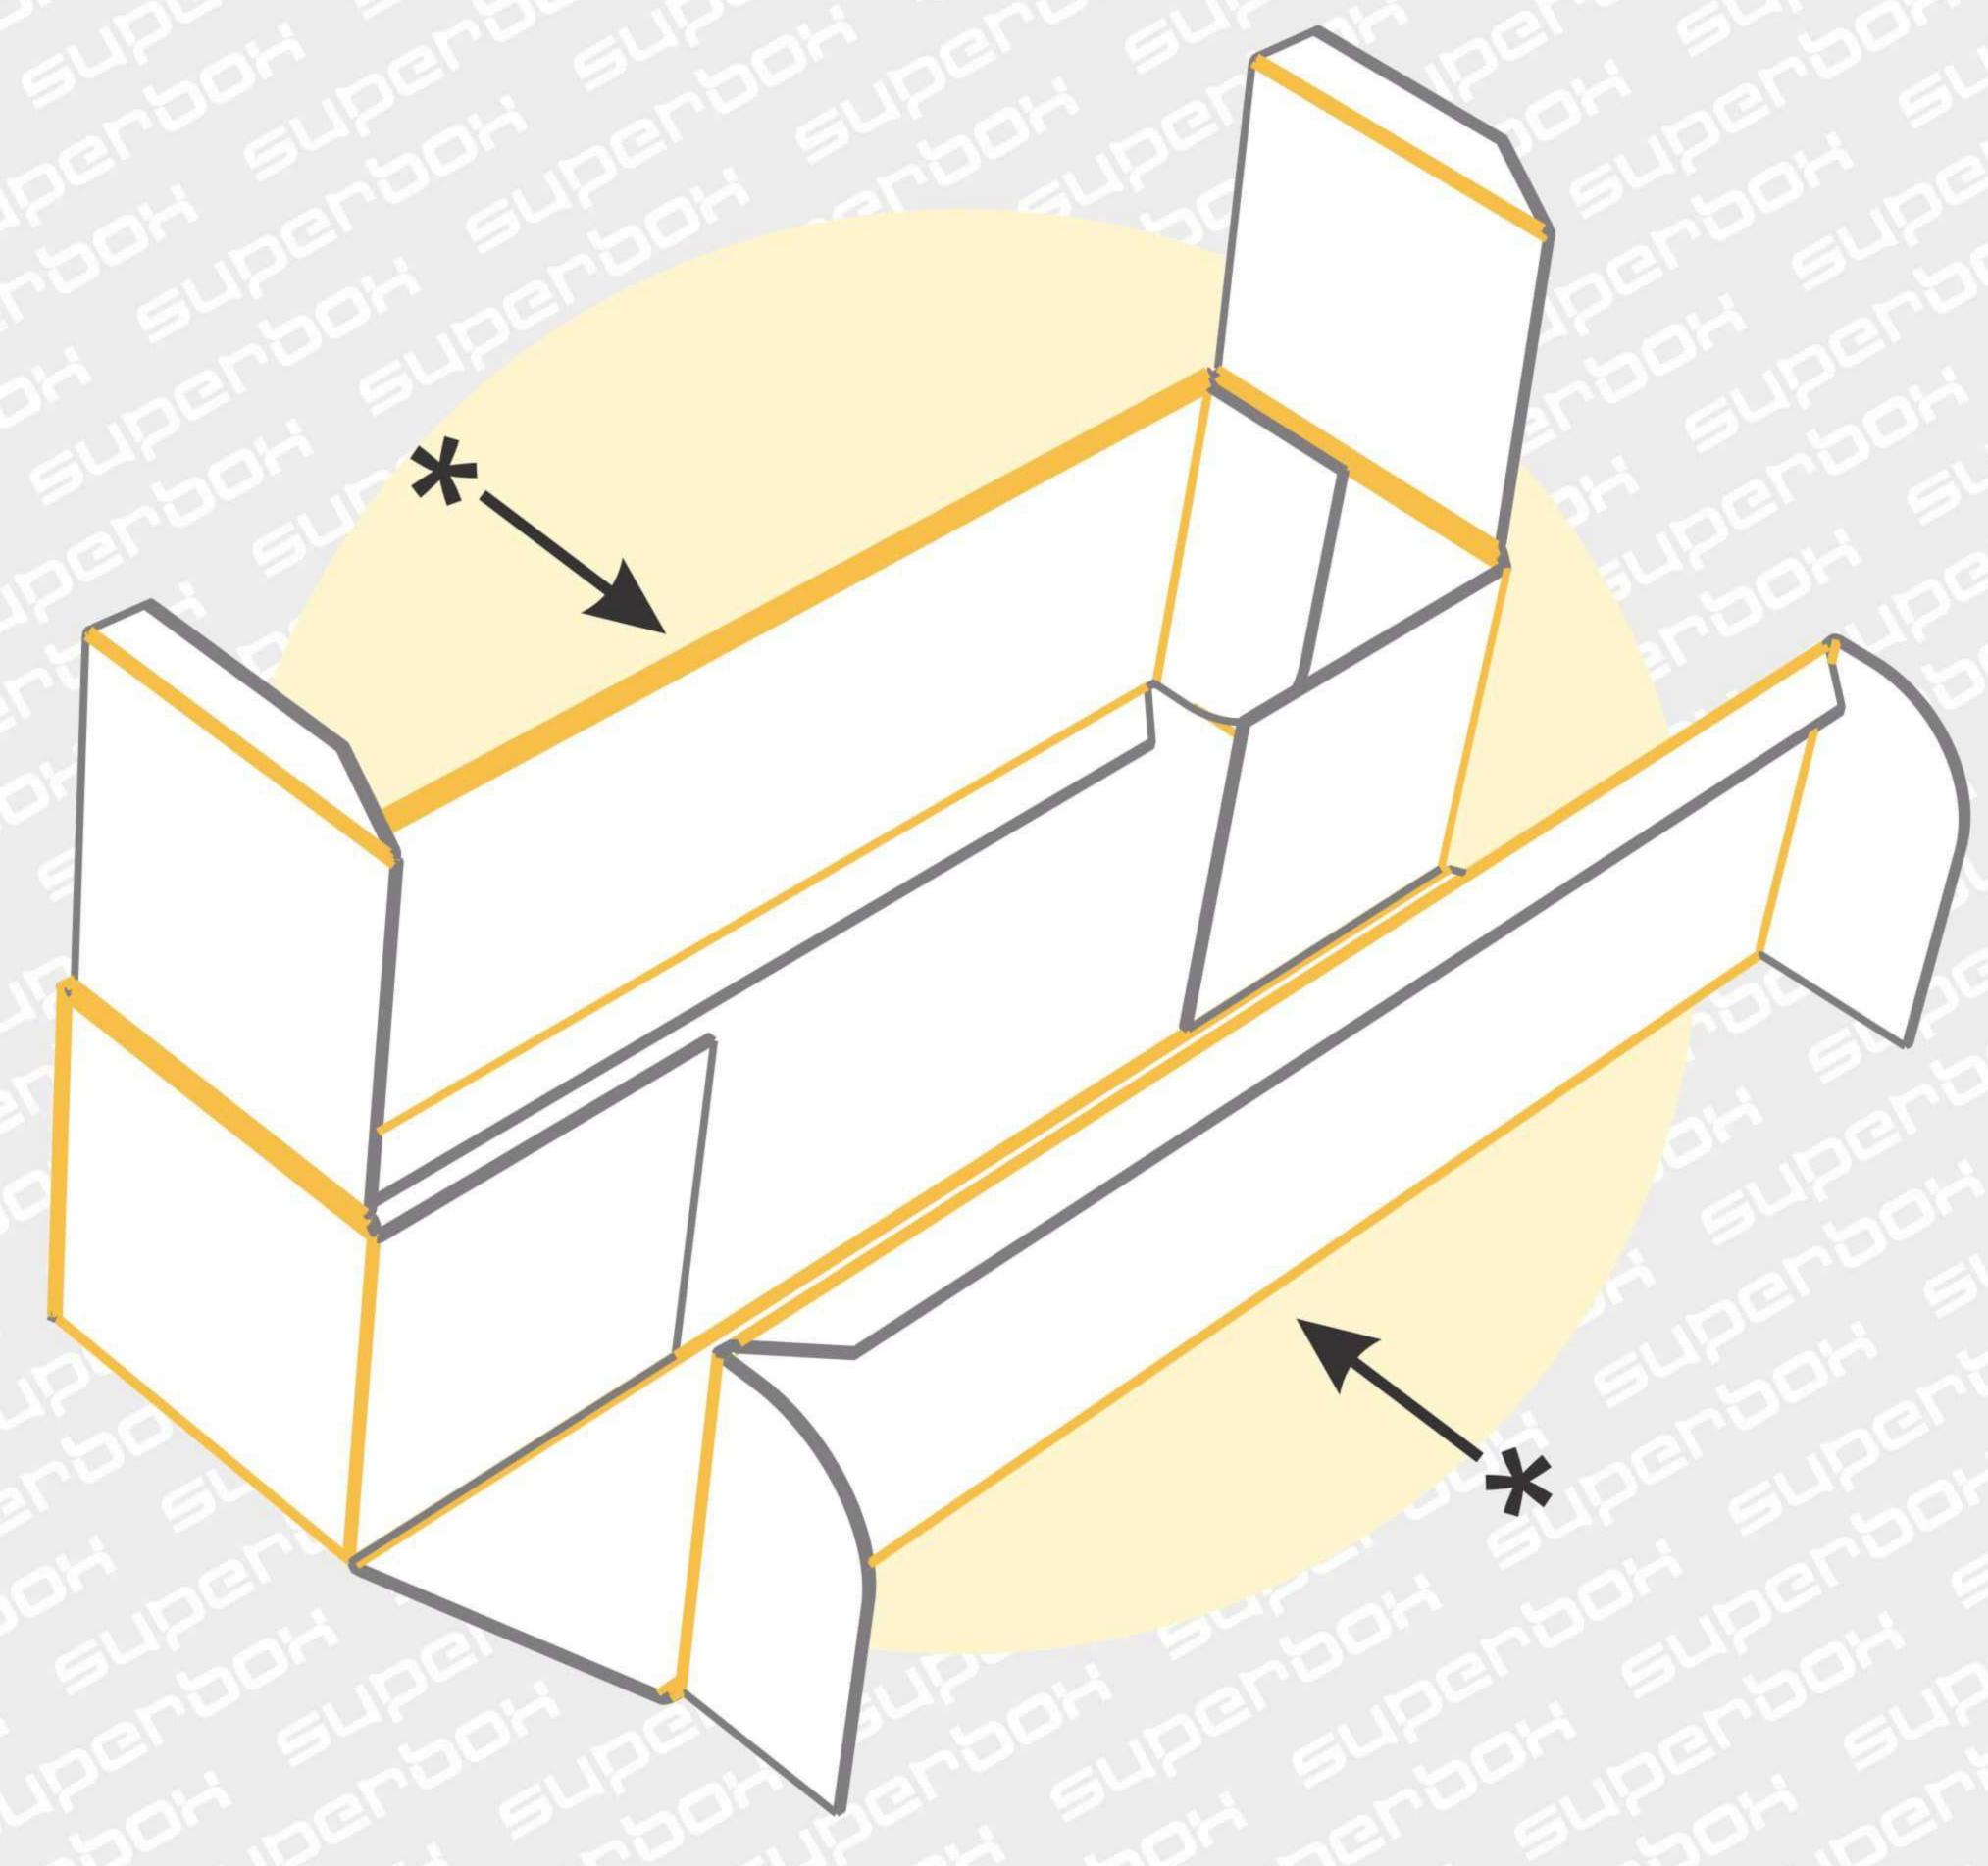

Place the template on a flat surface and put a little stress
on the bending lines by folding them slightly back and forth.

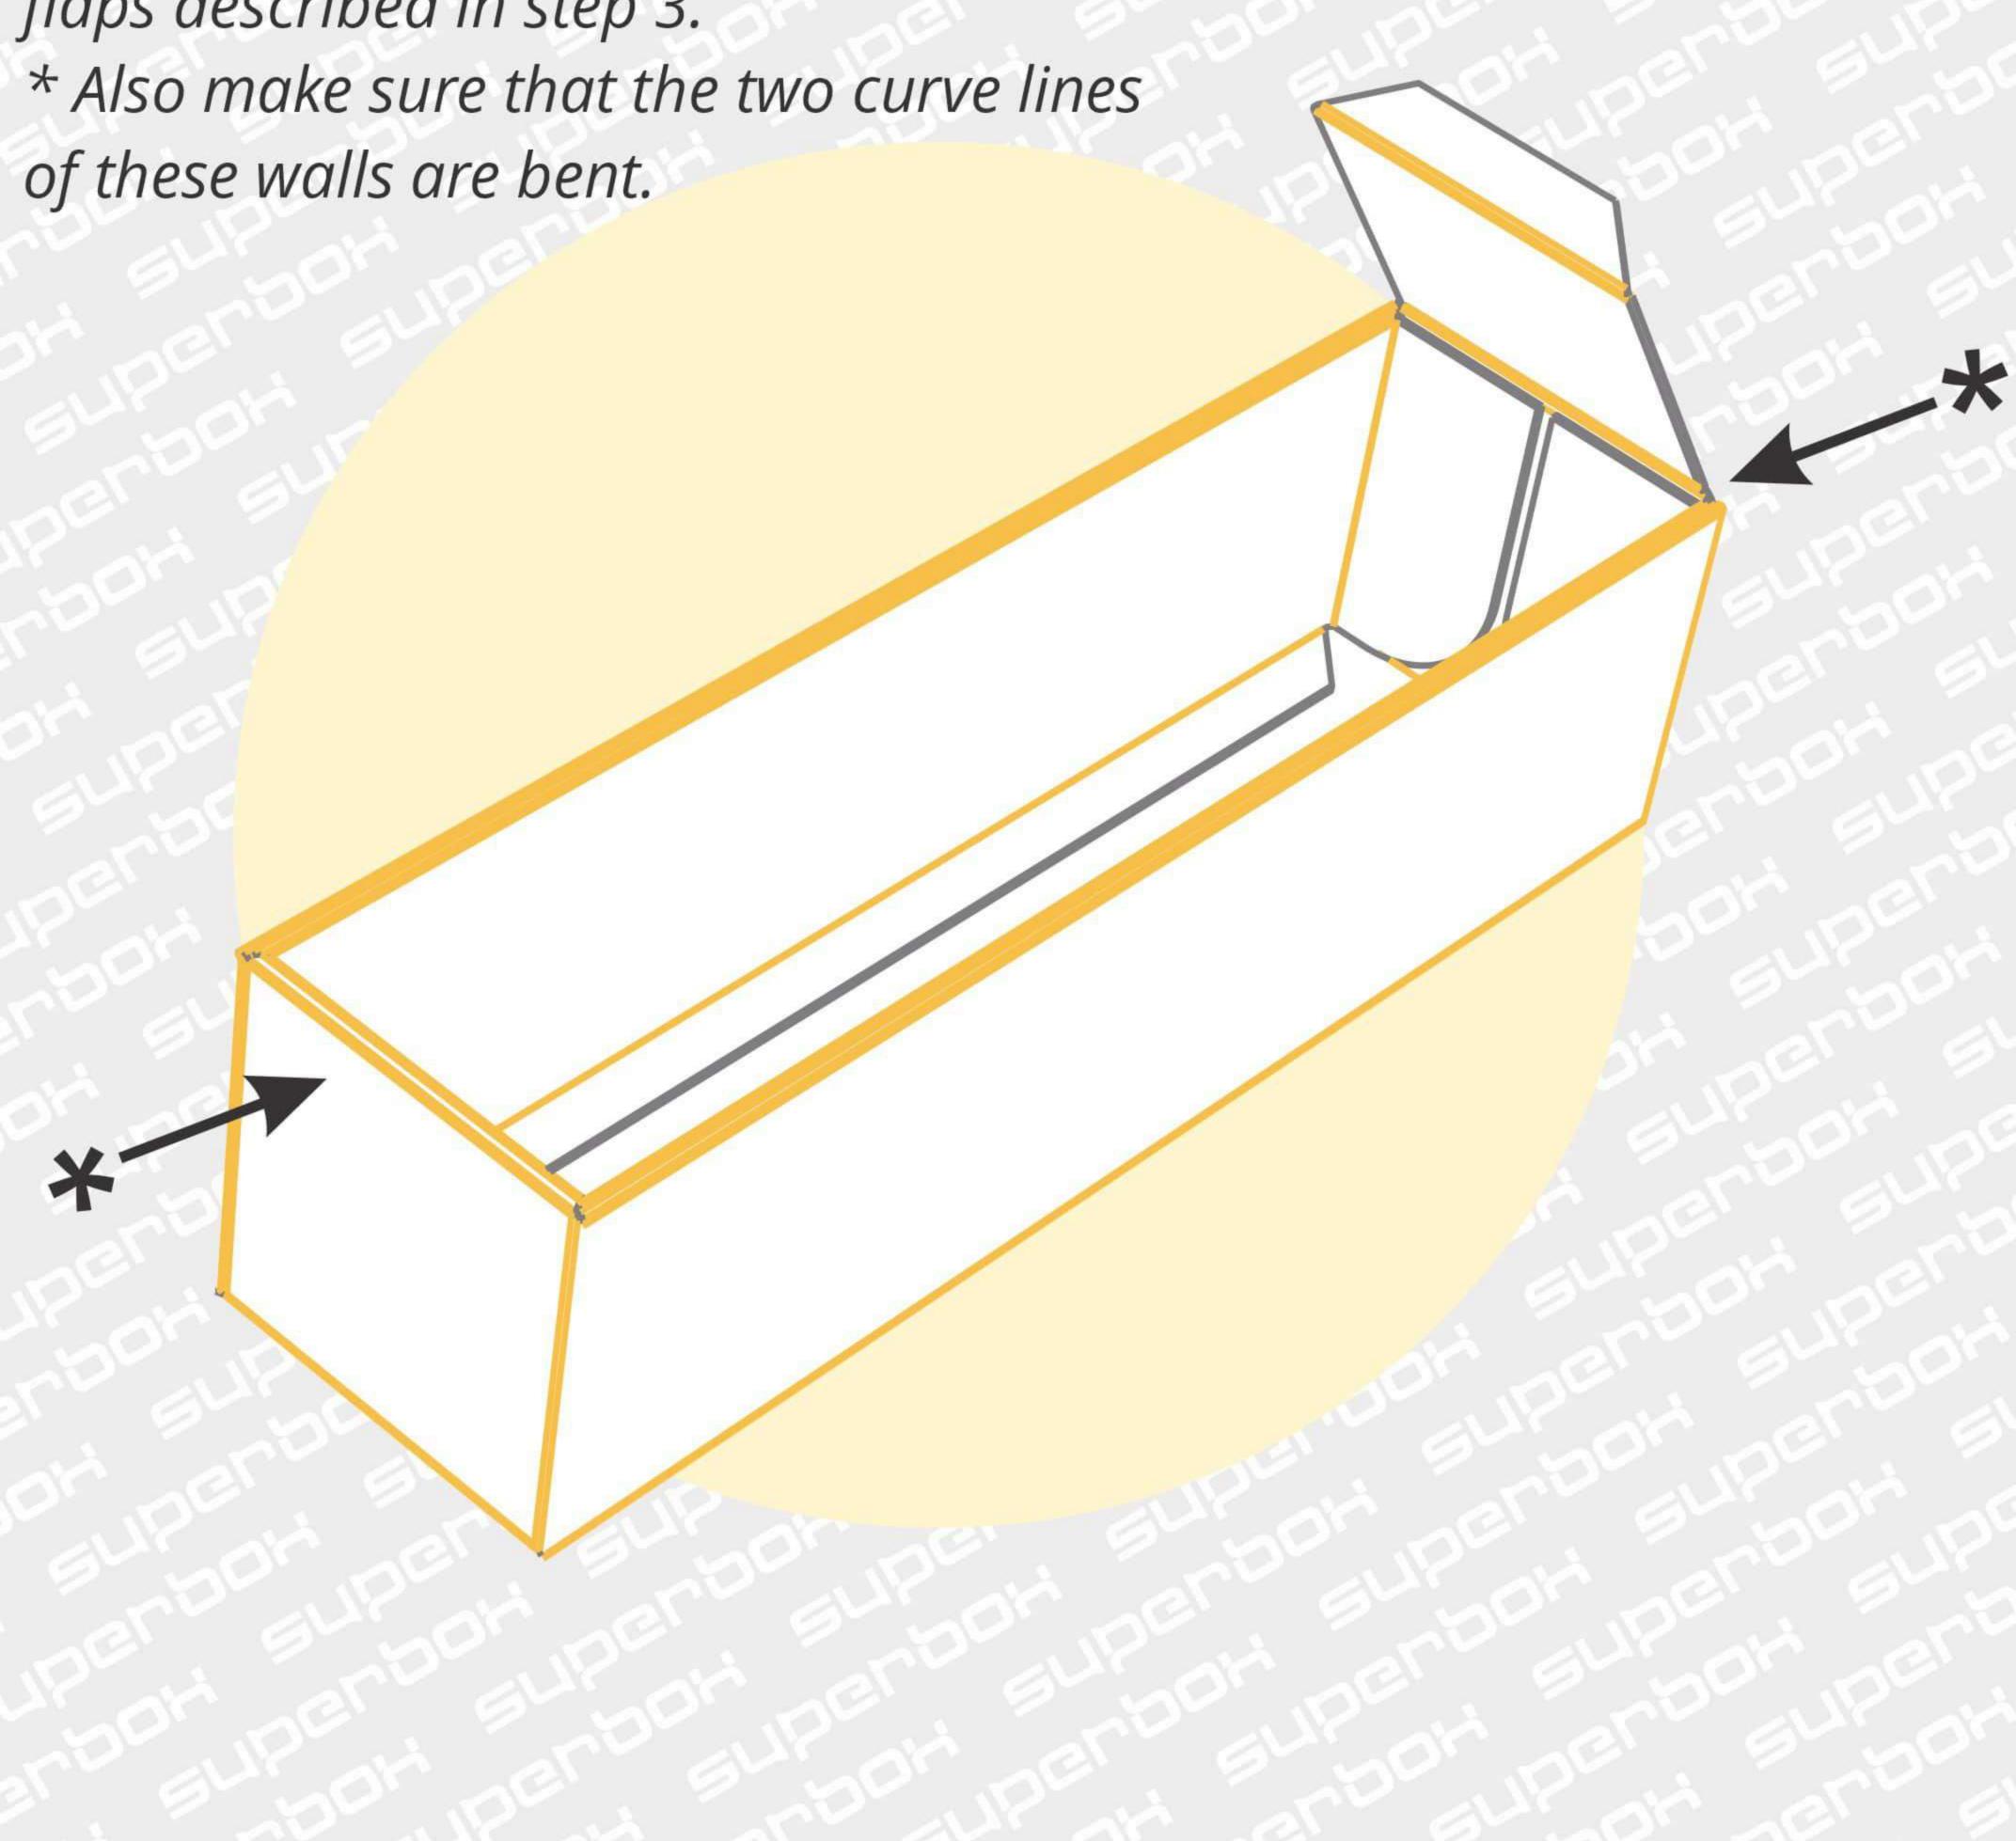

Position these side walls and fold in the inner flaps. * Start folding from the walls with the flaps closer to the plane of the lid.

Fold out the small flaps and the narrow curb of the remaining two walls to the opposite side and fold these walls over to enclose the flaps described in step 2. * Make sure that the two bending lines of these walls are aligned.

Fold the narrow curb to the opposite side and fold the remaining walls over, enveloping the flaps described in step 3.

* Narrow curbs must "meet" at the corners and lock the sides of the lid to prevent them from unfolding.

For a long pull-out gift box sleeve

Turn the template downside towards yourself.
